

# FITBUDDY

## AI FITNESS PLAN GENERATOR

### PHASE 8 – PROJECT DEMONSTRATION

#### Project Demonstration Document

#### 1. Demonstration Purpose

Phase 8 provides the final demonstration of the FitBuddy project as an implemented application. The demonstration explains the project name, purpose, uses and benefits, working process, and final output. It also demonstrates the relevant application workflow, database/API interaction, and project repository.

#### 2. Demonstration Materials

| No. | Demonstration Item                             |
|-----|------------------------------------------------|
| 1   | Working FitBuddy application                   |
| 2   | GitHub repository                              |
| 3   | Screenshots of the actual application features |
| 4   | Demo video                                     |
| 5   | Presentation / PPT                             |

#### 3. Project Information to Explain

The Phase 8 demonstration should explicitly explain the following five required points:

1. Project Name – FitBuddy: AI Fitness Plan Generator
2. Purpose – To generate a personalized fitness plan based on the user's input.
3. Uses / Benefits – Provides a structured 7-day fitness plan with relevant nutrition and recovery guidance.
4. Working Process – The user provides input, FitBuddy generates a 7-day plan, nutrition/recovery information is presented, feedback can be used to update the plan, and the application communicates with the database/API as applicable.
5. Final Output – The completed personalized fitness plan generated by FitBuddy.

#### 4. Actual FitBuddy Demonstration Flow

1. Introduce the project name: FitBuddy – AI Fitness Plan Generator.
2. Explain the purpose of the project.
3. Explain the uses and benefits.
4. Enter / show the user's required input.
5. Generate and demonstrate the 7-day fitness plan.
6. Demonstrate the nutrition and recovery information provided by the application.
7. Demonstrate the feedback step and explain how the plan can be updated based on feedback.
8. Explain the database / API interaction used by the application.

9. Show the final generated output.
10. Show the GitHub repository and relevant project files.
11. Conclude the demonstration by summarizing the working process and final result.

## **5. Features Demonstrated**

Only the features that are actually implemented in the FitBuddy application should be demonstrated. The demonstration should not claim Login, Main Dashboard, History, Logout, or any other feature unless that feature is present in the actual application.

## **6. Demonstration Conclusion**

The Phase 8 demonstration presents FitBuddy as a working AI fitness-plan application. The demonstration covers the project name, purpose, benefits, user input, 7-day plan generation, nutrition and recovery guidance, feedback and plan updating, database/API workflow, final output, and GitHub repository. This provides the required demonstration of the project's working process and result.
