

01_Brainstorming and Ideation

FitBuddy – AI Fitness Plan Generator using Gemini Models

1. Problem Identified

Users may find it difficult to create a suitable fitness plan based on their personal goals, preferences, and requirements.

2. Existing Problem / Limitations

- General fitness plans may not match every user's needs.
- Users may not know how to structure a weekly workout plan.
- It can be difficult to get personalized guidance for workout and nutrition.

3. Proposed Project Idea

FitBuddy is a web-based AI application that generates a personalized fitness plan based on user-provided details such as age, weight, fitness goal, and preferred intensity. It uses Google Gemini models to generate the plan.

4. Main Objective

To develop an AI-based web application that provides users with a personalized 7-day fitness plan according to their requirements.

5. Initial Feature Ideas

- User input for personal details
- Fitness goal selection
- Preferred workout intensity
- AI-generated 7-day workout plan
- Nutrition/recovery tips
- Feedback-based plan refinement

6. Target Users

People who want personalized fitness planning and guidance based on their individual goals and preferences.

7. Rough Workflow

Step	Process
1	User enters details
2	FitBuddy receives user requirements
3	Gemini AI processes the requirements
4	Personalized fitness plan is generated

Step	Process
5	User views the plan
6	User can provide feedback
7	Plan can be refined

Note: This phase focuses on how the project idea originated and does not include the application's source code.
